

Dear customer

CANON MACHINERY INC.  
Quality assurance Dept  
Gen. manager HONMA, Yoshihide

**Notification about  
replacing the SSR(for heating control)  
of curing machine BCOS series**

We appreciate your business with our products.

Concerning the semiconductor curing machine BCOS series that we supplied is equipped the SSR(Solid State Relay) for heating control.

The SSR has potential to cause a contact melting from aged deterioration (Service life : 7-10years). So, we recommend to replace the deteriorated SSR by our service engineer.

The model of SSR is different from manufacturing year. And any model showed below is equipped.

- ①OMRON : G3F-203SN、G3PA-210B、G3NA-210B
- ②PANASONIC : AQN111L

**In case of emergency that heating control should become malfunction, 《 the machine will show [Heater temp. trouble] on display panel, and flash/light red sign on the signal tower, and beep alarm. So, TURN OFF the main breaker. 》 Please be careful for your safety.**

\* Continued use may cause damage to the machine due to temperature increasing.

We will, if possible, replace the SSR in field service for a reasonable charge. Please contact the receptionist below for any questions.

We sincerely appreciate your cooperation with us/our products.
